Work History

Zen Computer Systems Sdn Bhd — Solution Architect Cum Pre-Sales (2022-07-01 –)

- Collaborate with the sales team to identify and qualify potential software project opportunities.
- Conduct in-depth analysis of client requirements, business processes, and technical needs to develop tailored software solutions.
- Prepare and deliver compelling presentations and demonstrations showcasing the company's software capabilities and value proposition to potential clients.
- Work closely with clients to understand their pain points, objectives, and desired outcomes, translating them into clear software requirements.
- Collaborate with the software development team to develop project proposals, including project scope, timelines, and cost estimates.
- Provide technical expertise and guidance during the pre-sales process, addressing client inquiries, concerns, and technical requirements.
- Participate in client meetings, workshops, and presentations to gather project requirements and ensure alignment between client expectations and software capabilities.
- Assist in preparing and reviewing software project contracts, statements of work, and pricing proposals.

Blue Vinegar Sdn Bhd — Technical Analyst (2020-06-01 – 2022-06-01)

- Communicate with the clients to provide technical supports and guidance by gathering information via ticket system.
- Diagnose, address and resolve the root causes of the system issues.
- Monitor the system database to ensure the accuracy and precision of the data by executing SQL commands and scripts.
- Conduct testing and evaluation on new and existing systems for enhancements and improvements.
- Coordinate with the internal team to ensure projects are within the timeline and the scopes.

Jadi Imaging Technologies Sdn Bhd — Ecommerce Content Entry (2019-10-01 – 2020-10-01)

- Responsible in listing all the products for the marketplace section by ensuring the accuracy of the data and studying the hierarchical structures of each product.
- Maintained and updated the e-commerce website contents regularly based on the requirements and scopes.
- Conducted data analysis for interpretation to identify key metrics and draw conclusions, mainly on Sales and Targeted Product.
